

Saving as a PDF Using Mac OsX

Mac OsX allows the user to save virtually any file as a PDF (yes... any!). It is very simple:

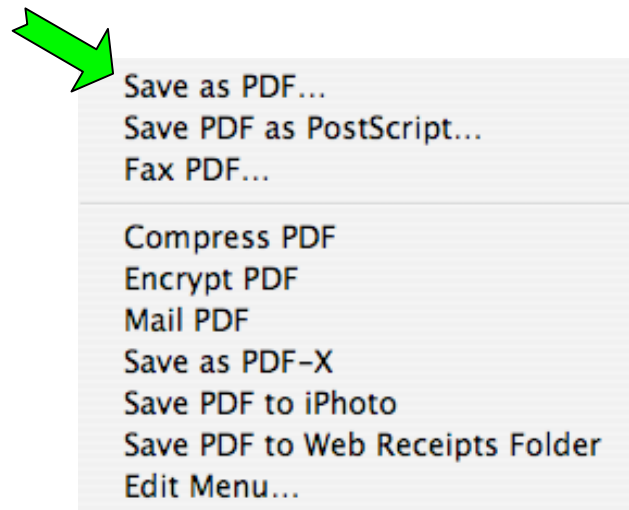

Step 1: Create the file which you wish to save as a PDF.

Step 2: Choose the “Print” option from the “File” menu.

Step 3: In the print dialog box, choose the “PDF” button.

Step 3: In the drop-down menu, choose to “Save as PDF...”

Step 3: Choose a name for the new file, and place to save it, and then click the save button.
