Contents

Preface iii

Chapter 1. Introduction 1
1. Stacks as categories 1
2. Stacks from groupoids 4
3. Triangles 9
4. Conics 13
5. Elliptic curves 15
6. Orbifolds 20
7. Vector bundles 24
8. Functors, fibers, and groupoids 25
9. Gluing and descent 26
Answers to Exercises 27

Chapter 2. Fibered categories and CFGs 29
1. The base category $\mathcal{S}$ 29
2. Examples 30
3. Fibered categories (optional) 35
4. Categories fibered in groupoids 36
Answers to Exercises 38

Chapter 3. The fiber product 39
1. Construction and examples 39
2. Pullbacks of diagrams 46
3. Fiber diagrams 48
4. Universal property (optional) 49
Answers to Exercises 55

Chapter 4. Atlases 59
1. Groupoid schemes 59
2. CFGs from groupoid schemes 63
3. Constructions with groupoid schemes 64
4. The 2-category of groupoid schemes (optional) 68
Answers to Exercises 70

Chapter 5. Stacks and Stackification 73
1. The stack axioms 73
2. Stacks 75

3. Stacks from groupoid schemes 77
4. Stackification via torsors 81
Answers to Exercises 87

Chapter 6. Deligne-Mumford stacks 89
1. Stacks with representable diagonal 89
2. Definition of a DM stack 100
3. A Criterion for a stack to be a Deligne-Mumford stack 103

Chapter 7. Properties of DM stacks 107
1. Properties of non-representable morphisms 107
2. Topological properties of DM stacks 109
3. Separated and Proper morphisms 113

Chapter 8. Stacks of curves 123
1. Irreducibility of $\mathcal{M}_g$ 123
2. The universal curve and the stacks $\overline{\mathcal{M}}_{g,n}$. 128
3. Hurwitz schemes, admissable covers and stacks of stable maps 128

Chapter 9. Algebraic spaces; coarse moduli spaces 129
1. Algebraic spaces - some basic facts 129
2. Moduli spaces of curves 148
3. Algebraic orbifolds 148

Chapter 10. Sheaf cohomology of Deligne-Mumford stacks 149
1. Quasi-coherent sheaves on stack 149
2. Local constructions 157
3. Coherence of higher direct images under a proper morphism 157
4. The theorem on formal functions 158
5. Proof of connectedness theorems 159

Chapter 11. 1-dimensional Deligne-Mumford stacks 161
1. Dimension zero 161
2. Footballs 162
3. The associated orbifold curve 165

Chapter 12. Vector bundles and sheaves; Pic 167

Chapter 13. The stack of elliptic curves 169
1. Characteristic $\neq 2$ 170
2. Characteristic $\neq 3$. 175
3. The general case. 176
4. The moduli stack of stable elliptic curves 177
5. Modular forms 181
6. Classical modular forms 184
7. Relation between the classical and the "new" modular forms 187
8. Branched covers of $\P_1$ and triangles 192

Answers to Exercises 193

Chapter 14. Intersection theory on Deligne-Mumford stacks 197
1. Introduction and basic definitions 197
2. Equivalence on vector bundles 212
3. Intersection theory via deformation to the normal cone 216

Chapter 15. Stackification 233
1. Covering sieves 233

Chapter 16. Algebraic stacks 257
1. Preliminaries on algebraic spaces 257
2. Definition and properties of algebraic stacks 260
3. Restricting the base category 272

Chapter 17. Group actions on stacks 277
1. Action on categories 277
2. Group actions on CFG's and stacks 282
3. Actions of algebraic (semi)groups on algebraic stacks 283
4. Invariant substack, si fa per dire 283
5. Generalization: (semi)group objects among groupoids 284

Chapter 18. Cone stacks 287

Chapter 19. Points and gerbes 289
1. Gerbes over sites 289

Chapter 20. Stacks of vector bundles 297

Chapter 21. Sheaves and cohomology (sites?) 299
1. Coherent sheaves 299
2. Discrete Coefficients 314

Appendix A. Descent Theory 331
1. History and motivation 331
2. The affine case 335
3. The general case 338
4. Faithfully flat descent 341
5. Non-effective descent: an example 345
6. Further descent results 346
Answers to Exercises 350

Appendix B. Categories and 2-categories 353
1. Categories 353
2. 2-categories 358
3. Adjoints 370
4. Pseudofunctors 376
5. Two remarks on set theory 384

Answers to Exercises 386

Appendix C. Groupoids 391
1. Groupoids 391
2. Morphisms of groupoids 397
3. 2-Isomorphisms 399
4. Isomorphisms 401
5. Fibered products 404
6. Simplicial constructions 410

Appendix D. Sites 415
1. Introduction 416
2. Grothendieck topologies and sites 418
3. Presheaves 421
4. Sheaves 423
5. Sites whose morphisms are local 426
6. Sheaf epimorphisms 428
7. Covering sieves 430

Chapter E. Glossary 435
1. Schemes and fibered products 435
2. Morphisms 437
3. Grothendieck topologies 441

Bibliography 447
